Evolution: From Historical Roots to Biological Puzzles

Charles Darwin's book, "The Origin of Species by Means of Natural Selection" published in 1859, represented a seminal event in science. Today all biology is viewed through the lens of evolution. In this 5 part series we will explore the theory of evolution beginning with its historical roots and ending with the biological puzzles not easily accounted for within the framework of classic evolutionary concepts.

Jan. 12: *History of Evolutionary Concepts: pre-and-post Darwin*

Jan. 19: *Genomic Basis of Evolution: recent Advances.*

Series B

Controversy & Conflicts In Contemporary Politics

The last 20 years or so have seen some remarkable changes on the political scene in Canada and the world. The rise of populism in North America and Europe is seen by many as a threat to democracy. Attempts to re-write history have given us a new phenomenon known as the politics of memory. The resurgence of religious politics has left its mark on a variety of countries on four continents. The Brexit referendum in Great Britain and the advent of Donald Trump have made trade policy a major issue in international relations. The maintenance of security in post 9/11 world has posed challenges to the civil rights of citizens. These are all topics worthy of serious reflection, and it is to that this series of lectures is dedicated.

February 23: *The Politics of Memory: rewriting History* Jamie Swift, Author and Historian, Kingston
